Top 10 counties

County	Overall score	Gas supply	Grid connection	Site control	Air permit	Community	Data coverage
Culberson	80	84	53	69	100	95	100%
Crockett	77	78	44	70	100	92	100%
Upton	75	87	34	67	100	85	100%
Winkler	74	84	48	67	100	72	100%
Roberts	74	72	40	66	100	93	100%
Pecos	74	92	22	72	100	83	100%
Loving	74	73	33	63	100	100	100%

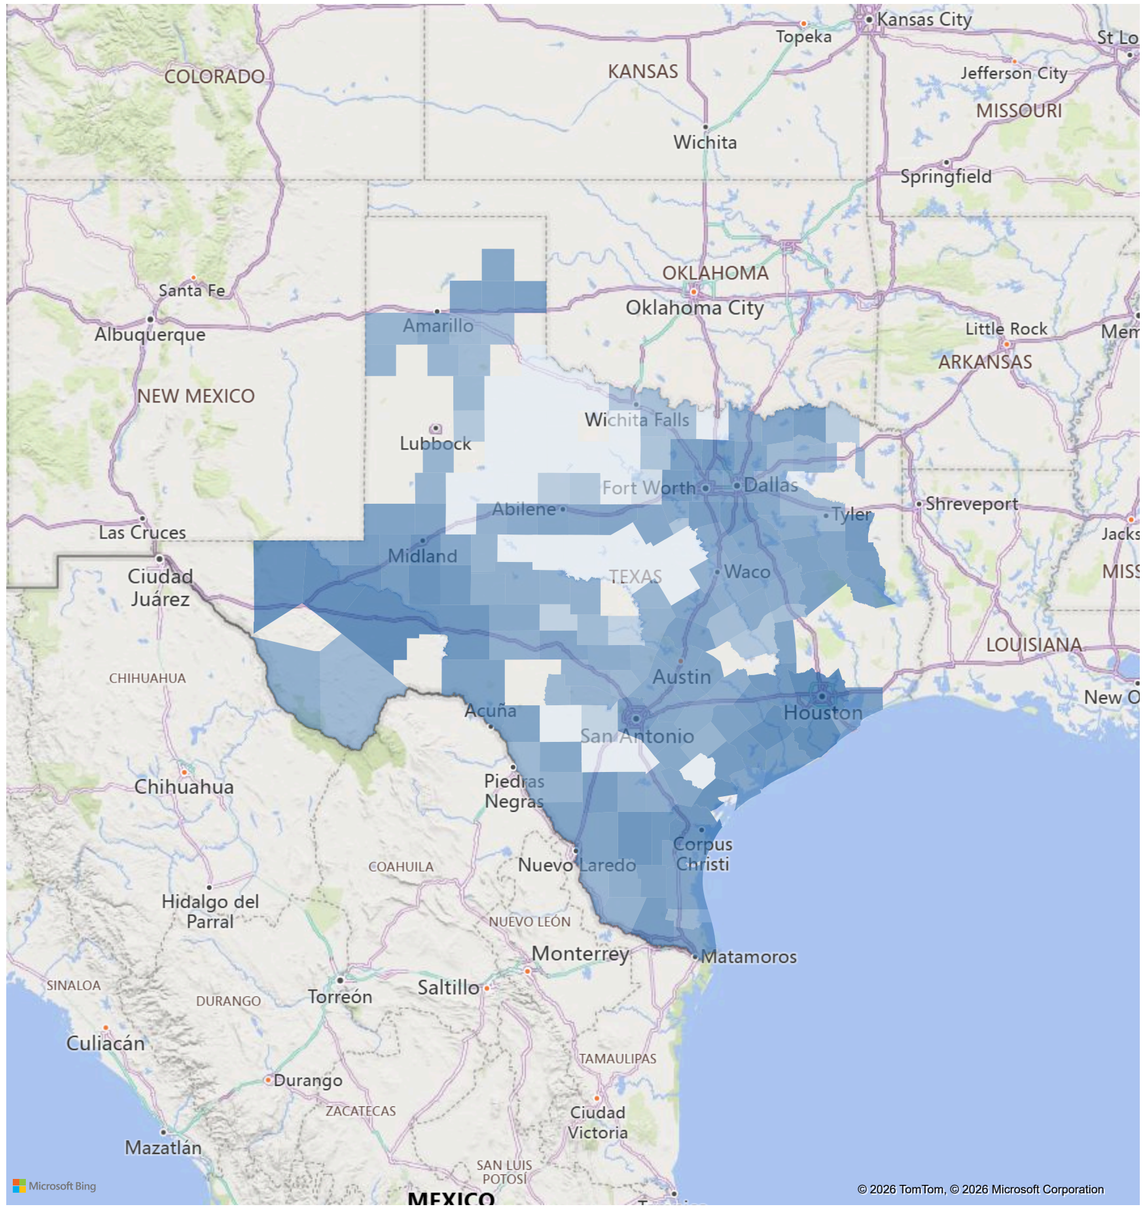

Set how much each category matters (0 removes it) and untick any components you don't want. Click a county on the map or in the table to zoom in on it. For the full breakdown of any county, go to County detail and pick it from the box.

Factor

- ○ Active gas queue
- ○ Active interconnection queue
- ○ Existing generation capacity
- ○ Gas and coal 40+ years old
- ○ Gas fleet capacity factor
- ○ Gas gathering pipe
- ○ Gas pipeline operators
- ○ Gas transmission pipe
- ○ Generation trend 2020-2024
- ○ Interstate gas pipe
- ○ Land in large tracts (100+ ac)
- ○ Landowners per 1,000 rural acres
- ◉ Large gas pipe (20 in and up)
- ○ Ozone nonattainment severity
- ○ Parcels of 500+ acres
- ○ Population density
- ○ Realized capacity factor

Large gas pipe (20 in and up) (miles)

Score on this factor (darker = better)

County	Value	Score

Category	Metric	Unit	Better when	Source	Data as of	How it's scored	Notes
Air permit	Ozone nonattainment severity	rank 0-5	lower	EPA Green Book	Aug 2026	Scored 0-100 against the other ERCOT counties: lowest value = 100, highest = 0.	EPA ozone rating under the stricter of the 2008 and 2015 standards: 0 Attainment, 1 Marginal, 2 Moderate, 3 Serious, 4 Severe, 5 Extreme. A worse rating means a harder, more expensive air permit.
Background info	Industrial and utility land	acres	higher	TxGIO StratMap Land Parcels 2025, state land-use codes F2 and J3	May 2025	Not scored. Shown in Background info on County detail.	Acres coded as industrial (F2) or electric utility (J3) land. Only shown where at least 80% of parcels have a land-use code, about a third of counties.
Background info	LNG export terminals	terminals		Compiled by hand; Golden Pass status from EIA, April 2026	Sep 2026	Not scored. Shown in Background info on County detail.	LNG export terminals operating or under construction. They compete for pipeline gas but also mean large supply lines are nearby. Status needs checking now and then.
Background info	LNG export terminals (names)			Compiled by hand	Sep 2026	Not scored. Shown in Background info on County detail.	Terminal names and status, for example "Golden Pass LNG (Operating)".
Background info	NOx credit price (area median)	USD per ton per year	lower	TCEQ Emission Credit Trade Report	Sep 2026	Not scored. Shown in Background info on County detail.	Median price paid for NOx credits in the area, a one-time purchase per ton per year. Blank where the area had no priced trades (San Antonio and El Paso).
Background info	NOx credit tons traded (area)	tons per year	higher	TCEQ Emission Credit Trade Report	Sep 2026	Not scored. Shown in Background info on County detail.	Tons per year of NOx credits sold in the area, Oct 2024 to Sep 2026. Houston sold 87 in two years; one 100-ton-per-year plant at 1.3 to 1 would need 130.
Background info	NOx credit trades (area)	trades	higher	TCEQ Emission Credit Trade Report	Sep 2026	Not scored. Shown in Background info on County detail.	Number of priced NOx credit trades in the county's ozone area, Oct 2024 to Sep 2026. Credits must come from the same area, so few trades can mean credits are hard to find at any price.
Background info	NOx major source threshold	tons per year	higher	Clean Air Act nonattainment permit rules		Not scored. Shown in Background info on County detail.	A plant emitting this much NOx or more needs a nonattainment permit and must buy offset credits. Only for counties that fail an ozone standard. Elsewhere, plants still need pollution controls but don't buy offsets.
Background info	NOx offset cost per ton emitted	USD per ton per year	lower	Calculated: offset ratio x area credit price	Sep 2026	Not scored. Shown in Background info on County detail.	Up-front credit cost for each ton per year of NOx the plant will emit; multiply by the plant's own emissions. 0 where no offsets are needed; blank where the area had no priced trades.
Background info	NOx offset ratio	tons of credit per ton emitted	lower	Clean Air Act nonattainment permit rules		Not scored. Shown in Background info on County detail.	Tons of credits a plant must buy for each ton of NOx it will emit. 0 where no offsets are needed.
Background info	Ozone classification		lower	EPA Green Book	Aug 2026	Not scored. Shown in Background info on County detail.	The county's EPA ozone rating. Houston and Dallas-Fort Worth are Severe under the 2008 standard and Serious under 2015; permits follow the stricter one.
Background info	Ozone standards breached			EPA Green Book	Aug 2026	Not scored. Shown in Background info on County detail.	Each ozone standard the county fails and its rating, for example "2008: Severe 15; 2015: Serious". Only for counties that fail one.
Background info	Parcel coverage of county	ratio		TxGIO StratMap Land Parcels 2025 and US Census	May 2025	Not scored. Shown in Background info on County detail.	Parcel acres divided by the county's Census land area. Close to 1.0 means the parcel data is complete. Harris is 0.40 (partial file); Frio (2.8) and Chambers (1.7) have overlapping parcels. Land scores are blank outside 0.8 to 1.25.
Background info	Parcel data month	year and month		TxGIO StratMap Land Parcels 2025		Not scored. Shown in Background info on County detail.	Month the county appraisal district's data was collected.
Background info	Parcels with a land-use code	share 0-1		TxGIO StratMap Land Parcels 2025	May 2025	Not scored. Shown in Background info on County detail.	Share of parcels that have a state land-use code. Many counties leave it blank (Wharton, Fort Bend and Travis are at 0%).
Community	Population density	people per sq mi	lower	US Census population estimates (2025) and Gazetteer land area (2024)	Jul 2025	Scored 0-100 against the other ERCOT counties: lowest value = 100, highest = 0. Uses a log scale so a few very large counties don't flatten the rest	Fewer people means fewer neighbors near a plant and usually less local opposition. A rough measure only.
